Summary

Researcher at the Machine Learning Lab (ML Lab), POSTECH, advised by Prof. Dongwoo Kim. My research centers on how the context an LLM operates in—its interaction history, user feedback, and the harness around it—shapes model behavior, and on turning this understanding into methods that make LLMs easier to guide, efficient to refine, and adaptive to individual users. This spans human-AI collaboration, personalization of LLMs, and reinforcement learning for LLMs.
